GAS

Reduce gas consumption by around 85%, through the use of water charged by hydroxyl free radicals.

ODOR

Reduce undesirable smells, due to the potent cleansing properties found by using hydroxyl free radicals.

ELECTRICITY

Reduce electricity by nearly 5%, due to faster wash and dry times, through the use of water charged by hydroxyl free radicals.

WEAR

Reduce textile replacement by over 10%, by less heating of cotton products in both the washer and dryer, through using water charged by hydroxyl free radicals.

WATER

Reduce water consumption by around 20%, through the use of water charged by hydroxyl free radicals.

REWASH

Reduce rewash by 50%, through increased sanitation found by using hydroxyl free radicals.

CHEMICALS

Reduce chemical cost by using low temperature products and less bleach through using water charged with hydroxyl free radicals.

WASH TIME

Reduce fill times and shave precious minutes as water charged by hydroxyl free radicals only require low fill levels.

CONTAMINANTS

Reduce human exposure to super bugs in your linen up to 99% germ free, through the use of water charged by hydroxyl free radicals.

DRY TIME

Reduce time when extracted products have less retained water through the use of hydroxyl free radicals.
